EXPORT SUMMARY

U.S. export earnings from horticultural products during July 1986 were valued at \$222 million, 13 percent above July 1985. The fresh and dried fruit categories largely were responsible for the improved export performance. Citrus sales to Japan, our most important overseas outlet, remain strong with grapefruit and lemon movement in July recording large gains. Exports of non-citrus fruit including sweet and tart cherries to Japan and the European Community (EC); grapes to the EC, Canada, and Singapore; and plums to Hong Kong and Taiwan also were up noticeably over July 1985. Export shipments of raisins during the current season continue to flow at levels above a year earlier thanks to increased buyer interest in Western Europe. Dried prune exports in July benefitted from larger sales to Canada and the EC. Fiscal year (FY) 1986 (October 1985-September 1986) exports of horticultural products are estimated at \$2.67 billion, about \$70 million above FY 1985. While this year's short almond crop will limit export gains for tree nuts in FY 1987, the relatively weak dollar and increased funding of export promotional programs by USDA is expected to push horticultural exports to \$2.8 billion in FY 1987.

For further information on items in this circular, contact the Horticultural and Tropical Products Division, (202) 447-6590. All measures unless otherwise noted, are metric. One kilogram (kg)=2.2046 lbs., 1 metric ton=2,204.62 lbs., 1 liter=0.2642 gallon, 1 hectoliter=26.42 gallons & 1 hectare (ha)=2.471 acres

UPDATE

UPDATE

General Developments

--The United States and the European Community (EC) tentatively have resolved their 17 year old dispute over citrus trade. Under the agreement, which still must be approved by the EC Council, the EC has agreed to improve access for U.S. oranges, lemons, and minneolas, in return for U.S. agreement not to attack the EC's preferential trade arrangements with the Mediterranean countries. As a result of the agreement, the United States lifted its retaliatory duties on imports of EC pasta on August 21. The EC, in turn, lifted its counter-retaliatory duties on U.S. lemons and inshell walnuts. In the course of negotiations, both parties agreed to improve access for a number of other products.

The European Community will take the following trade liberalizing steps under terms of the agreement:

Sweet oranges: Duty will be reduced from 20 percent and 13 percent to 10 percent for 20,000 tons, "extra" quality only, entered in February-April.

Minneola tangelos: Duty will be reduced from 20 percent to 2 percent for 15,000 tons entered in February-April.

Lemons: Duty will be reduced from 8 percent to 6 percent for 6,000 tons entered from January 15 through June 14.

Grapefruit: Duty will be reduced from 3 percent to 1.5 percent during November-April.

Almonds: Duty will be reduced from 7 percent to 2 percent for 45,000 tons.

Roasted peanuts: Duty will be reduced from 14 percent to 12 percent for packages over 1 kilogram, and from 16 percent to 14 percent for packages of 1 kilogram or less.

Frozen Concentrated Orange Juice (FCOJ): Duty will be reduced from 19 percent to 13 percent for 1,500 tons of concentrate of 50 degrees brix or less in packages of 2 liters or less.

The United States has agreed to take the following trade liberalizing steps:

Canned anchovies: Duty will be reduced from 6 percent to 3 percent for 3,000 tons.

Cheese import quotas: Quotas for Italian and Portuguese type cheeses of EC origin will be increased by 1,750 tons.

Sheep's milk cheese: Duties will be reduced from 12 percent and 9 percent to zero.

Canned mandarin oranges: Duty will be reduced from 0.2 cents per pound to zero for 40,000 tons.

Olives: Duties on 5 categories representing less than 15 percent of U.S. imports were reduced as follows:

In brine, not ripe, not stuffed or pitted, bulk, green only—
20 to 10 cents per gallon for 4,400 tons.

In brine, ripe, not pitted or stuffed, green only—
30 to 15 cents per gallon for 730 tons.

In brine, stuffed, place packed in containers 0.3 gal. or less—
30 to 15 cents per gallon for 2,700 tons.

Dried, not ripe—
5.0 to 2.5 cents per pound.

Otherwise prepared and preserved, green only—
5.0 to 2.5 cents per pound for 550 tons.

Capers, prep, pres.: Duties will be reduced from 16 percent to 8 percent.

Cider, fermented: Duties will be reduced from 3 to 1.5 cents per gallon

Paprika: Duty will be reduced from 2.7 cents to 1.35 cents per pound.

Olive oil: Duties will be reduced from 3.8 cents to 2.28 cents per pound for containers under 40 pounds, and from 2.6 cents to 1.56 cents per pound for containers of 40 pounds or more.

All of the quota levels on the EC and U.S. concessions are to be granted on a most-favored-nation basis. EC member states and countries receiving preferential tariffs will not ship under the quotas. The EC concessions are dependent upon approval of the agreement by the EC Council. The U.S. concession on the cheese quotas can be put in place at the discretion of the President. The U.S. tariff reductions will require Congressional action. The EC has agreed to implement its concessions on oranges, minneolas, and FCOJ as soon as the U.S. cheese quota concession is implemented. The remaining EC concessions will be enacted after Congressional approval of the U.S. tariff cuts.

The United States or the EC can withdraw from the agreement if a settlement of the U.S.-EC pasta dispute is not reached by July 1, 1987, or at the time of Congressional approval of the U.S. tariff cuts, whichever comes later.

—U.S. exports of horticultural products to Japan in the first half of 1986 were up 18 percent from a year earlier. Exports to Japan were valued at \$315 million in January-June 1986. Among the items showing strong growth were fresh grapefruit and papayas, canned peaches and fruit cocktail, fresh asparagus, frozen corn, french fries and peas, canned corn, and almonds.

—Hong Kong importers have for the first time chartered ships to move California produce to Hong Kong. This action reportedly was taken because of an increase in conference shipping rates for scheduled liners.

UPDATE

--Mexico has rescinded the list of products for which import permits are automatically denied. These products, however, will continue to be subject to the import permit system (see Horticultural Products Review, August 1986). Among the horticultural products no longer on the automatic denial list are fresh cut flowers, fresh stone fruit other than cherries, fresh berries except strawberries, dates, inshell walnuts, dried apples, pears and prunes, preserved olives, frozen fruit with added sugar, jellies and jams, canned fruit, fruit and vegetable juices except orange juice, beer, and wine.

--Singapore's food importers may turn to alternative suppliers for fresh fruits and vegetables as problems brew in the Australian shipping industry. Unofficial strikes at several Australian docks and wildcat strikes at airports have caused concern about supply disruptions. This concern is increased by the new Australian budget which is likely to cause dissatisfaction among workers, which could lead to additional strikes and the possibility of major disruptions in Singapore food supplies. Singapore obtains 8 percent of its fresh vegetable imports and 17 percent of its fresh fruit imports from Australia.

U.S. exporters may be able to capitalize on these concerns. Singapore traders increasingly are looking to the United States for high quality, high value products and appear willing to pay relatively higher U.S. prices. Traders in East Malaysia and Papua New Guinea also have expressed concerns regarding the reliability of future supplies from Australia.

Citrus and Products

--Orange price negotiations between Brazilian processors and growers for the 1986 season remain deadlocked. Orange growers reportedly have been asking for 43 cruzados (\$3.12) per 40.8 kg. box with a payment schedule based on 20 percent at time of contract signing, 10 percent monthly payments over the following six months, and the 20 percent balance at the conclusion of the harvest. Counter-proposals made by the processing industry are viewed by growers as unreasonably low, and at the same time would force growers to assume an income risk factor which in the past has been borne completely by processors. Processors have been offering growers three options: The first calls for a fixed price of 14 cruzados (\$1.02) per box. Option two allows a grower to receive 10 cruzados (\$0.73) per box plus 50 percent of net profits made on export sales of orange juice. Option three offers growers 5 cruzados (\$0.36) per box plus 100 percent of net export profits. Last season's average grower price was a record \$4 per box, nearly double the price obtained in the 1984 season and four times greater than in 1983.

Trade sources indicate that the processing industry already has purchased up to half of the current crop under its three price alternatives and that ample juice inventories have relieved any pressure to reach a final price agreement with grower organizations. The Brazilian Government's apparent slowdown in issuing export licenses for orange juice generally is perceived as an attempt to persuade processors to conclude an early price settlement with growers rather than an attempt to force up the international price of orange juice.

Strong winds and a hailstorm during mid-August caused some fruit loss in the Bebedouro area of Sao Paulo, but much less than the 5 to 7 million box estimates reported by the local press. USDA has forecast the 1986 harvest in Sao Paulo at 210 million boxes, 20 million boxes lower than a year ago. Because of a smaller volume of oranges available for processing and an expected decline in the industrial juice yield, production of frozen concentrated orange juice in the 1986 season is projected to fall 30 percent to 600,000 metric tons at 65° brix (207 million gallons at 42° brix).

Fresh Non-Citrus

—Taiwan plans to lift its import ban for U.S. fresh pears effective Sept. 15, 1986, opening up a new marketing opportunity for U.S. exporters. The import tariff will be 67.5 percent of the c.i.f. value. Imports will have to be accompanied by a phytosanitary document certifying that the pears are free of Mexican fruit fly, plum circulio, apple maggot, and codling moth.

Dried Fruit and Nuts

—Imports of raisins into Bahrain, Kuwait, Qatar, Oman, and the United Arab Emirates (U.A.E.), all members of the Gulf Corporation Council, have been increasing, in total and from the United States. About 7,740 metric tons were imported last year with the U.A.E. (6,000 tons) and Kuwait (1,000 tons) the major markets. About 85 percent of the U.A.E. total was re-exported, mostly to India and neighboring countries. Kuwait also re-exports 30 to 40 percent of its imports, mainly to Saudi Arabia. Iran supplies 85-90 percent of both countries' imports because the quality is acceptable and the price is lower than the competition. Iranian raisins are imported in 10 kilogram cartons and are used by bakeries, for home cooking and as a snack food. Retail-pack raisins from the United States and Europe mostly are sold at supermarkets for use by more affluent consumers. Recent wholesale prices per kilogram in the U.A.E. were reported at \$0.65 for dark and \$0.98 for high quality golden from Iran, while U.S. golden raisins were reported at \$1.58. Although the Bahraini market is small, only about 140 tons annually, it caters to the retail trade. The United States is the principal supplier, followed closely by Iran. Recent wholesale prices were \$1.20/kilogram for Iranian goldens and \$1.60/kilogram for U.S. goldens. Both Qatar (100 tons) and Oman (500 tons) receive supplies from their neighbors. U.S. exports to these 5 countries through the first 7 months of 1986 were 201 tons, up 35 percent from the same period in 1985 when exports for the year totaled 250 tons.

—The 1986 Conference of Raisin/Sultana Producing Countries was held July 28-30 in Cumbria, England. The conference participants concluded that the trend to higher production and stocks will reverse in 1986/87, largely on account of voluntary acreage diversion in California. No major producing country plans to increase plantings in the next few years, although South Africa hopes to bring a newly-irrigated tract—twice the size of the present producing area—into production in 10 to 15 years.

UPDATE

Conferees also discussed the unsettling effect of the EC's Minimum Import Price (MIP) program, especially the UK's re-interpretation of transportation and insurance costs for MIP purposes when the UK is not the first EC port of entry. The EC has taken no action to create separate MIP's for packaged and bulk fruit or to differentiate between raisins and sultanas. Representatives from Afghanistan, Australia, Greece, South Africa, and Turkey attended the conference. The United States sent an observer. Mexico, Chile, and China will be invited to attend next year's session, also to be held in England.

Vegetables

--French tomato processors are facing serious difficulties because of high stocks and low-priced Italian imports, which have combined to depress prices. The volume of tomatoes processed may fall to 310,000 tons, 10 percent below early-season forecasts and well below France's European Community processing quota of 392,000 tons. Two major cooperatives have abandoned tomato canning altogether this year, and one private canner has canceled grower contracts, preferring to pay a cancellation penalty rather than process the tomatoes. French stocks of tomato paste at the beginning of the 1986/87 season were nearly half of 1985/86 production, and stocks of canned tomatoes were nearly two-thirds of 1985/86 production.

Stocks of tomato products throughout the EC are burdensome, and despite some reductions in processing aid for this year's crop, prices are reported to be falling (See August 1986 Horticultural Products Circular).

--Potato shortages in Peru are likely to continue over the next several months because of reduced plantings for fall harvest in the country's coastal areas. The Peruvian Government already has purchased 7,000 tons of potatoes from France in 1986 to help offset domestic production shortfalls (Horticultural Products Circular, August 1986). In addition, Peru's Ministry of Agriculture has authorized the private trade to import 3,000 tons.

--The European Community (EC) has exempted sweet potatoes for human consumption from import restrictions. These restrictions, consisting of the suspension of import licenses, were enacted April 19, 1986. The exemption applies to sweet potatoes in packages of 20 kilograms or less, with a free at frontier price of at least 85 ECU per 100 kilograms (\$0.39 per lb.).

Wine, Beer, and Hops

--On July 26, 1986, the European Community increased the export subsidy for Spanish white table wine, and established an export subsidy for Spanish concentrated grape must, shipped to most non-EC countries except the United States, Canada, and Mexico. The subsidy for white table wine was set at the equivalent of \$0.51, and that for concentrated grape must at \$0.46, per percent alcohol by volume per 100 liters. For a white table wine with 11 percent alcohol, the subsidy is about \$0.06 per liter.

WORLD CANNED MUSHROOM TRADE 1/

Global exports of canned mushrooms in 1985 were about the same as the 1984 level. Shipments from China were up by 8 percent and increases also were recorded by Hong Kong, Macao, the Republic of Korea, and France. Exports by Taiwan, however, were down by nearly a third. In recent years, Spain and the Netherlands have become important suppliers of canned mushrooms. The United States remains the world's largest importer, accounting for over one-half of the total trade.

European Community import quotas for canned mushrooms from non-members for 1986 remain at 34,750 tons (20,850 tons drained weight equivalent). Annual quotas have remained at this level since 1981; in recent years the quotas have not been filled because of increased production within the EC. Distribution of the 1986 quota is as follows:

1986 EUROPEAN COMMUNITY IMPORT QUOTAS FOR CANNED MUSHROOMS
(Drained weight equivalent)

<u>EC-12</u>	<u>Metric tons</u>
West Germany	19,626
Denmark	525
Other Member States	669
 Total	 20,850

Of the above allocation, China would have nearly 80 percent of the total, with most of the balance taken by Taiwan, Republic of Korea, and Hong Kong.

It is believed that China accounts for one-half of world exports of canned mushrooms. Fujian Province, with 17 canneries, is the largest producer and exporter, accounting for about one-half of the total. Other canneries are located in Shanghai, Nanning and Hangzhou.

The United States is the major recipient of China's canned mushroom exports, taking nearly one-third of the total. Other principal markets are West Germany, about 20 percent, and Japan, about 10 percent. Most of China's exports to the United States are stems and pieces. Chinese canneries pack under private labels for several large U.S. companies and also provide bulk shipments for a few large restaurant chains. China maintains an export licensing system for canned mushrooms. Reportedly, China is content with its current share of the global market, fearing that increased shipments would depress prices and reduce export earnings.

1/ Unless noted otherwise, all weights are metric, drained weight basis. One metric ton equals 2,204.6 pounds or approximately 91.859 standard 24-lb cases of mushrooms, drained weight. A factor of 0.6 is used to convert net weights (mushrooms, plus liquid in which they are packed) to drained weight.

CANNED MUSHROOMS

South Korea's processing of canned mushrooms declined by 17 percent in 1985, reflecting lower fresh mushroom production, decreased profitability, and competition in export markets. Domestic consumption is increasing, but is far from sufficient to offset potentially lower export demand. Exports of canned mushrooms were up by nearly 29 percent in 1985, as processors reduced prices by 30 percent in efforts to move heavy stocks. However, shipments during the first 4 months of 1986 are lower, and continued further declines are anticipated.

The United States was the principal market for South Korea's exports of canned mushrooms in 1985, taking 5,264 tons or 86 percent of the total. Canada was the second largest recipient with 702 tons, with most of the remainder going to Australia, Japan, Norway, and Finland.

The number of mushroom canneries remained unchanged at 15 in 1985, with a total annual canning capacity of about 12,000 tons, which is double current needs. Many canneries are processing other products when the supply of mushrooms is low and some are diversifying in view of the mushroom industry decline. The share of the 1985 fresh mushroom crop of 17,300 tons utilized by canneries was about 62 percent. This was unchanged from a year earlier, but was well below the 95 percent share utilized during the 1970's. The lack of grower price supports and subsidies, declining economic incentives, and farm labor shortages are likely to continue to suppress output in the coming years.

Taiwan's production of fresh mushrooms (*Agaricus bisporus*) is forecast to rise 4 percent in 1985/86 to 67,000 tons, with about 70 percent, or 47,000 tons designated for canneries. This represents a decline of 4 percent from the quantity processed by canneries during the 1984/85 December-November marketing year.

Exports of canned mushrooms fell sharply in 1984/85, and were the lowest since 1980/81. Despite considerable price reductions by Taiwanese exporters, shipments for the 1985/86 season are anticipated to approximate the low levels of a year earlier, as strong competition from China and Hong Kong is hurting sales. The United States was the largest recipient of 1984/85 exports, taking 16,729 tons, more than three-fourths of the total. Other important markets were Australia, Sweden, and Japan.

Taiwan's mushroom processors face high labor and raw material costs, making it increasingly difficult to compete with other foreign producers in export markets. The government may allow canneries some price reductions for raw mushrooms, which would help to lower export prices to more competitive levels.

U.S. imports of canned mushrooms during the July-June 1985/86 marketing year totaled 73,449 tons, 14 percent greater than a year earlier, largely reflecting increased imports of stem and pieces in containers over 9 ounces from Hong Kong. Hong Kong's low prices have resulted in a sharp jump in sales to the United States in recent years. Imports of mushrooms in containers over 9 ounces include large drums of mushrooms in brine, which are destined for packing in U.S. canneries. The unit import value (f.o.b., country of origin) for U.S. imports of all canned mushrooms was \$1.79 per kilogram, down from \$2.21 per kilogram during 1984/85.

CANNED MUSHROOMS

China and Hong Kong were the largest suppliers of canned mushrooms to the United States in 1985/86 with 53 percent of the total, followed by Taiwan with a 31 percent share of the market. Virtually all canned mushrooms from Hong Kong are grown in China.

Information on U.S. sales, apparent consumption, and market share of imports supplied by the United States International Trade Commission was not available at the time of publication of this report. These statistics will be reported in the commodity update section in a later issue of the Horticultural Products Circular.

SOURCE: STATISTICAL OFFICE OF THE EUROPEAN COMMUNITIES

CANADIAN MARKET FOR HORTICULTURAL PRODUCTS

Traditionally Canada has been the leading market for U.S. exports of horticultural products. In 1985, Canada imported \$1.8 billion ^{1/} of horticultural products, of which 62 percent came from the United States. The U.S. share was 64 percent in 1984 and 66 percent in 1983.

More than half the total is fresh fruits and vegetables. The United States had an 80-percent market share for fresh produce in 1985, down slightly from 1984 and 1983 despite higher volume. Leading fresh commodities in value of sales were grapes, oranges, tomatoes, and lettuce. U.S. shipments of fruit juices and concentrates, the next largest category, decreased 13 percent to \$100 million. The U.S. share of Canadian processed fruit and tree nut imports declined. The biggest loss was in canned fruit.

The flow of horticultural products is not only northward. In 1985, the United States imported \$302 million worth of horticultural products from Canada ^{2/}, a decrease of 3 percent. Beer ale and stout account for about 46 percent of the total. Other important U.S. imports in 1985 included potatoes and products, nursery products, apples, fresh and frozen berries, and carrots. Overall, the balance of trade in horticultural products was \$814 million in favor of the United States in 1985.

Undercounting of U.S. exports to Canada is a persistent problem, making data on U.S. exports to Canada an unreliable indicator of the trade. U.S. export data show horticultural product exports to Canada in 1985 at \$615 million, only 55 percent of the equivalent Canadian import number of \$1.1 billion (U.S. dollar equivalent). The statistical problem apparently is becoming worse. In 1983 and 1984 the official U.S. export values were equal to 71 percent and 64 percent, respectively, of Canadian imports.

^{1/} The data and analysis in this article exclude bananas and plantains. All dollar figures for Canadian imports in 1985 have been converted from Canadian dollars at a rate of US\$1=Can\$1.3655. ^{2/} Product mix comparable to Canadian import data. Monosodium Glutamate, gelatin, soft drinks, misc. beverages and sauces were removed from the U.S. import total.
